

### **What is IGEday?**

IGEday (Introduce a Girl to Engineering day) is an annually recurring event initiated by the **Womengineer** Foundation. Engineering companies and tech organizations are encouraged to open their doors to girls and non-binary students between the ages of 13-19 to let them experience what it is like to be an engineer for a day. Since the start in 2015, the goal is to have the participants meet role models and be inspired to choose engineering studies themselves.

### **Why do we do this?**

Today, young girls tend to refrain from higher technical education, despite their high grades and previously confirmed interest in tech. Ignorance of what these educations include, outdated norms linked to technology, and a misconception that it would be too difficult has, for far too many years, created a significant shortage of female engineers. We at Womengineer want to change that! We hope that the sometimes difficult-to-define picture of what an engineer does will be clarified through IGEday, so that Womengineer's vision can become a reality - that by 2030, equally as many women and men will graduate as engineers.

### **How is it done?**

A Friday every spring semester, companies on +100 sites around Sweden will open their doors to these young people. The companies will show all the amazing things that their engineers are doing and they make sure to gather their female engineers since we know that you aspire to what you can see. They describe their business idea, the challenges their industry is facing, and why engineers are important to bring our society into the future.

### **What can you do?**

Participation is free, and registration is open between January to March through IGEday's website. Do you know someone who you think should participate in IGEday? Encourage them to keep their eyes open [here!](#)
